

# PLY

MAGAZINE

## Mood: SUMMER 2018 – Flyer-led

Submit proposals to: [jacey@plymagazine.com](mailto:jacey@plymagazine.com)

Proposals due by: **June 1, 2017**

One of the most popular types of spinning wheels is the **flyer-led wheel**, also known as Scotch tension, so it's time for *PLY* to really dig deep and meticulously cover this wheel. **Do you know this wheel inside and out?** Would you like to help others get to know theirs? We'd love to hear from you.

We want to start with general getting-to-know-your-wheel, **care and maintenance**, and how-it-works articles, but that's just the beginning. We want lots of advanced articles and **interesting experimentation**. What happens when you change your brake band material? Your drive band material?

What is the best way to spin the **finest yarn** possible? What about spinning thick on a flyer-led wheel? Do you change it for **plying**, and how? Double treadle or single treadle, and why? Is this really the best beginner wheel? Is it the best type of wheel in general?

**What is this style of wheel best at**, and does it lag at anything? Is there any yarn or fiber you'd leave for a different wheel?

If you know this wheel, we want to hear from you. Let's build the best flyer-led wheel issue around! Submit your ideas to [jacey@plymagazine.com](mailto:jacey@plymagazine.com).

Send your ideas, proposals, projects, and design proposals by **June 1, 2017**, and we'll get back to you with a yes or no in July! Final articles and projects due by December 1, 2017.

Thanks,

**Jacey**
